

# Encourage Pathway or Health System Change

**1** **The opportunity:** create evidence and recommendations supporting effective patient management or system change to unblock growth potential

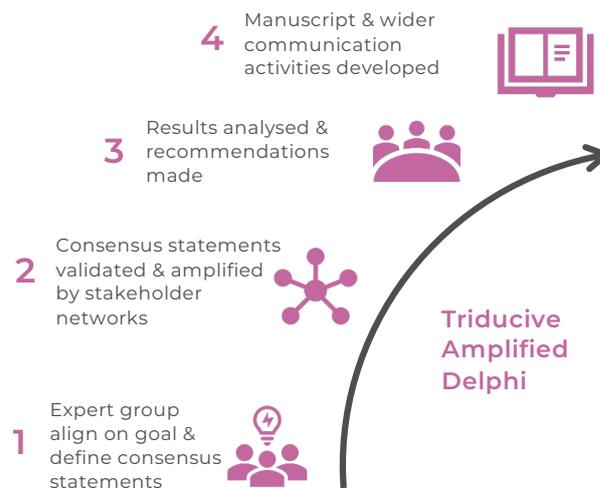

**2** **How Triducive amplified consensus works**

## Delphi Consensus

The 'Delphi' method is a highly effective method to support experts to reach consensus. First used in the 1950's by the US Department of Defence to understand the impact of technology on the cold war it is now used extensively

Delphi is a particularly well used method in healthcare and Triducive applies a version to help shape market context:

**3** **An example expanding access for diagnosis, treatment & management of ADHD\***

\*Attention Deficit Hyperactivity Disorder

### Problem

Treatment for ADHD is underdiagnosed & predominantly managed by specialists in secondary care with restricted capacity to initiate treatment

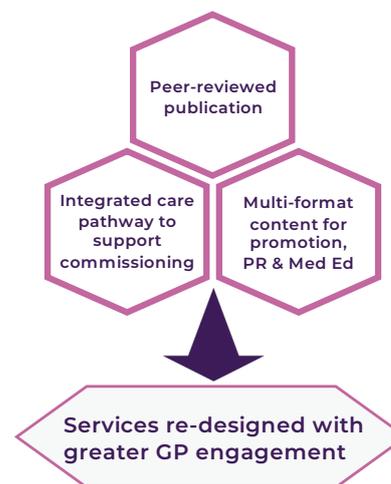

### Consensus achieved

**122** responses

**11** recommendations

“ There is strong consensus that **the involvement of wider agencies is critical** in understanding the impacts of ADHD and developing effective services ”

### Implementation plan

**4** **Discuss your challenge with us**
