

# Support HTA Submissions

**1 The opportunity:**  
turn expert experience into level 4 evidence that can be used to support registration or HTA dossiers

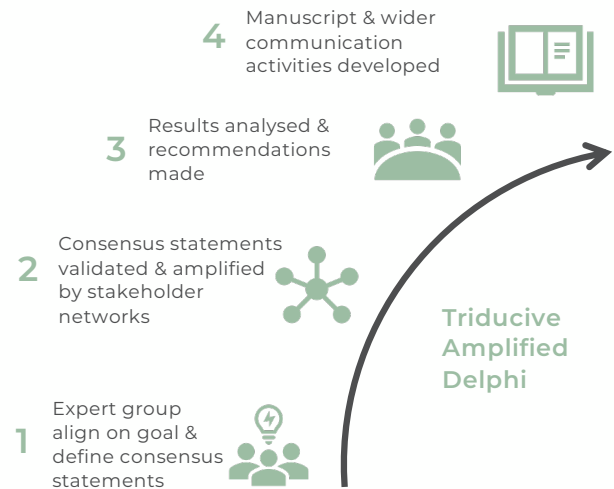

**2 How Triducive amplified consensus works**

## Delphi Consensus

The 'Delphi' method is a highly effective method to support experts to reach consensus. First used in the 1950's by the US Department of Defence to understand the impact of technology on the cold war it is now used extensively

Delphi is a particularly well used method in healthcare and Triducive applies a version to help shape market context:

**3 An example**  
generating evidence to close critical gaps required to register & gain EU market reimbursement

## Problem

A pre-registration (orphan) medicine for use in a rare disease lacked comparative data, of particular need for HTA submission

Time constraints and practicalities required an alternative approach to generate required evidence of sufficient credibility

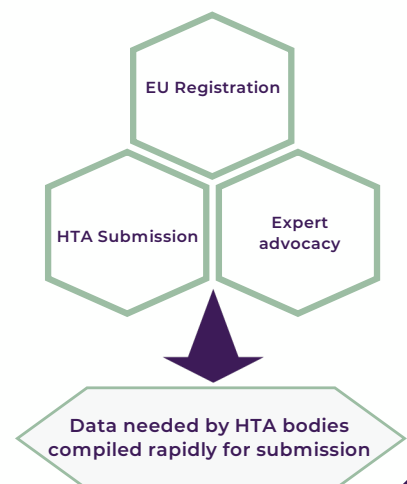

## Consensus achieved

**25** responses  
(>70% of the specialist group)

**5** recommendations

- Data gaps closed
- Expert support generated

## Implementation plan
